SCHOOL PROJECTS

Cub3D

- CUB3D is a 42-networking project, inspired by the world-famous eponymous 90's game, Wolfenstein 3D, which was the first FPS ever. The aim of this project is to create a dynamic view inside a maze, in which the player will have to find his way. CUB3D is a great opportunity to explore ray-casting technology, and to improve the skills in these areas: windows, colors, events, fill shapes.

Ft_services

- A System Administration and Networking project. ft_services consists of setting up an infrastructure of different services using cluster management and Kubernetes deployment.

Ft_container

- Ft_container is a project that aims to rebuild the built-in STL containers such as Vector, Stack, and Map. The project aims to introduce students to the available Data-structure/ algorithm of C++.

EDUCATIONAL HISTORY

1337, Coding school

Computer science | Since Oct 2019

- Using a PROJECT-BASED PEDAGOGY, the 1337 practical curriculum developed my learning abilities to match the expectations of the labor market.

Hassan II University: Faculty of Science

Bachelor of Science in Applied Mathematics

Oct 2015 - June 2019

- Studied fundamental concepts in applied mathematics such as linear algebra, complex analysis, probability-statistics, differential equations, and operational research.
- Final year project: Van-Kampen theory: calculus technics of a group associated with a topological space.

SUMMER JOBS:

Total Call

June 2018 - Oct 2018

- My duty was to help "FREE" clients (Internet service providers) have a better user experience.

June 2017 - Oct 2017

- A back-office agent processing Facebook reported tickets.
